

RAINWATER HARVESTING SERIES: 2

FACTORS IMPACTING YOUR CHOICE OF STORAGE TANK

Your tank is the most expensive part of a rainwater harvesting system. Spend time calculating the optimal size needed. These are the factors that will impact your choice:

Storage time in the tank

Size of the projected area and space available (inside and outside the building)

Estimated rainwater yield

Expected number of days without rain

Required water demand

Financial resources

Number and frequency of overflow

Load capacity of the floor slab
